PROFESSIONAL SUMMARY

Senior Production Support Engineer with 6+ years of production support experience in incident resolution, root cause analysis, and application reliability. Combines hands-on troubleshooting and team training with AI-assisted development of internal tools, investigation workflows, and operational reporting.

CORE SKILLS

Production support: Incident investigation and resolution, root cause analysis, ticket ownership through closure, escalation workflows, operational reporting, training and onboarding

Technology: SQL, APIs, AWS CloudWatch, DynamoDB, Lambda, S3, AI-assisted development with Kiro and Cursor, Microsoft SSO, Confluence, Jira, PHP, MySQL, HTML, CSS, Bootstrap, Git and GitHub

PROFESSIONAL EXPERIENCE

ConnectiveRx

Senior Production Support Engineer | July 2026–Present

Continue core production-support responsibilities, with expanded ownership of team training and internal tooling development.

- Train teammates through incident walkthroughs, shadowing, troubleshooting sessions, SOPs and runbooks, emphasizing critical thinking in investigations and effective Kiro AI use.
- Develop internal tools using Kiro for bulk-file processing, usage analytics and audit trails, knowledge-base consolidation suggestions, and matching similar tickets to resolution tools.
- Own assigned production support tickets through closure, using SQL, API troubleshooting, and root cause analysis to investigate application issues with cross-functional teams.

Production Support Engineer | 2019–July 2026

- Investigated and resolved complex production issues through debugging, SQL, APIs, and root cause analysis, working with AWS CloudWatch, DynamoDB, Lambda, and S3.
- Designed and built an internal support application with Kiro, defining its architecture, prompts, and reasoning logic for investigation workflows, escalation, and tool discovery.
- Built an operational reporting layer covering investigation trends, incident types, resolution times, and team usage to surface recurring patterns and training and process gaps.
- Selected for a CTO-sponsored premium support initiative, participating in daily standups to coordinate investigation and resolution work.
- Presented the internal support application to the CTO, then to the CEO and C-suite, communicating technical capabilities and opportunities to improve support workflows.

Ufeis | Yonkers, NY

Web Developer | December 2017–December 2019

- Developed production web interfaces with HTML, CSS, Bootstrap, PHP, and MySQL, including multi-role login and data-driven reporting using Google Charts and DataTables APIs.
- Tested and debugged applications and supported hosting and go-live activities.

INDEPENDENT PROJECT

NamiFlow

- Design and build AI-assisted investigation workflows that bring together documentation, code, and log evidence, with human review of proposed findings.
